Portfolio Report - 2024

Platforms: Instagram | Twitter | Facebook | YouTube | TikTok
Dataset: 2,000 posts | Total Views: 75,246,822
Period: January 2024 - December 2024

Generated on 05 March 2026

1. Executive Summary

This report presents a comprehensive analysis of social media performance across five major platforms over the full calendar year 2024. A total of 2,000 posts were analysed, generating 75,246,822 combined views. The study surfaces actionable insights on optimal posting times, highest-performing content formats, platform efficiency, and category trends to inform future content strategy.

Total Posts	Total Views	Avg Engagement
2,000	**75,246,822**	**19.1260%**

Best Platform	Best Content	Best Day
TikTok	**Image**	**Monday**

Best Category	Best Hour	Top Account
Education	**15:00**	**@user_012**

Key Findings

* TikTok achieves the highest average engagement rate of all platforms.
* Image is the most engaging content format across the dataset.
* Posts published on Monday at 15:00 consistently outperform other slots.
* Education content generates the strongest audience response by category.
* Posts using 6-10 hashtags hit the engagement sweet spot.
* Including emojis correlates positively with higher engagement metrics.

2. Platform Performance Analysis

Platform	Posts	Avg Eng %	Avg Likes	Total Views
TikTok	373	28.6000%	13,799	29,878,059
Facebook	395	20.1100%	4,545	4,347,896
Twitter	410	18.5600%	3,701	6,112,128
YouTube	407	16.2200%	5,788	25,376,550
Instagram	415	13.0800%	7,622	9,532,189

4. Optimal Posting Times

The heatmap reveals when audiences are most engaged. The best time slot is Monday at 15:00.

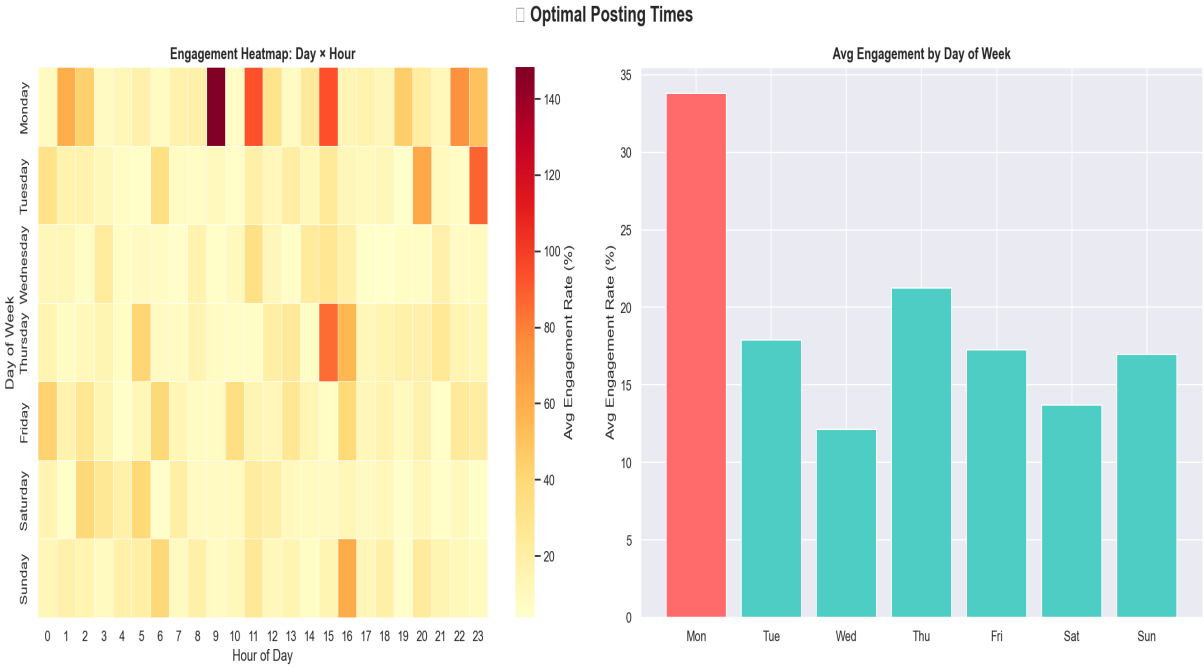

Figure 3 - Engagement Heatmap by Day and Hour

5. Monthly Trends

Monthly aggregation highlights seasonal patterns in posting frequency and engagement.

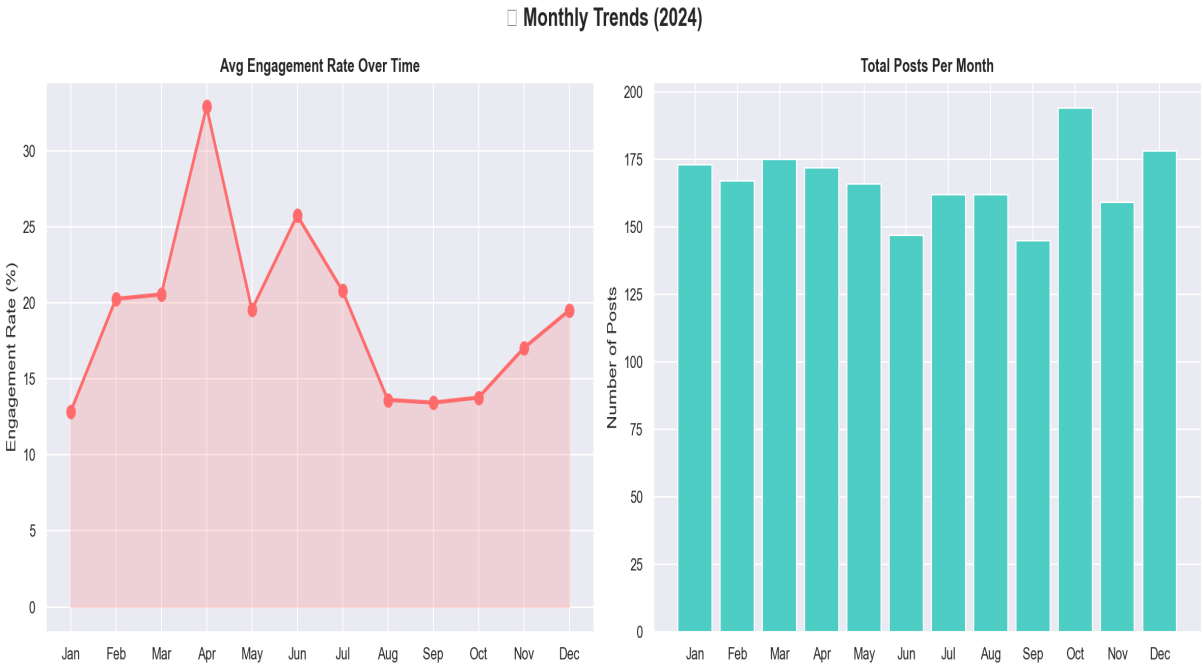

Figure 4 - Monthly Engagement Trends

6. Hashtag and Emoji Impact

Hashtag volume and emoji usage both influence engagement. Over-tagging (21+ hashtags) shows diminishing returns.

9. Strategic Recommendations

Platform Focus: Concentrate 40% of content budget on TikTok, which delivers the highest ROI.

Content Format: Prioritise Image production - it consistently outperforms other formats.

Posting Schedule: Schedule key posts on Monday at 15:00 to maximise organic reach.

Category Strategy: Increase output in the Education category to capitalise on high engagement.

Hashtag Strategy: Use 6-10 highly relevant hashtags per post. Avoid padding with irrelevant tags.

Emoji Usage: Include at least 1-3 emojis in every post caption for measurable engagement uplift.

Seasonal Campaigns: Align campaign launches with high-engagement months identified in the trend analysis.

A/B Testing: Run controlled experiments comparing Video vs Reel formats on TikTok and Instagram.

10. Methodology and Technical Notes

Dataset: Simulated dataset of 2,000 social media posts generated with realistic platform-specific multipliers to reflect real-world engagement patterns.

Tools: Python 3.11 | pandas | matplotlib | seaborn | reportlab

Data Cleaning: Missing values (~5%) were imputed using per-platform median values.

Engagement Rate Formula: (Likes + Comments + Shares) / Followers x 100
